## **PFT-Alexander SCUFF-GUARD**

- Tough, flexible, closed cell neoprene, bonded to lycra on the outside and high-strength nylon on the inside. Our standard SCUFF-GUARD is 5' long and fits a 4" nominal size loading hose. Other diameters and lengths are available.
- Black neoprene standard-other colors available (See Listing).
- Heat transfer decals, using the product name or your company logo are also available. We have found that the use of either the color coded SCUFF-GUARD or decals greatly reduces the problem of product contamination, (cross loading) when the SCUFF-GUARD gets soiled, it can be cleaned using warm water and a mild detergent.
